

Crystal Right Medias

Silica Crystals

**The best product for
problem water...**

Crystal-Right™ silica crystals are a natural choice for today's water conditioning systems. No other product does so much to condition problem water in a single pass.

These "zeolite" crystals come from a sodium aluminosilicate carefully produced and processed by Mineral-Right using an exclusive technology. Through its unique crystalline structure, *Crystal-Right™* provides superior removal of hardness, iron and manganese while raising pH levels of acidic water at the same time.

Unlike round, resin beads, *Crystal-Right™* crystals provide better filtration, and are thoroughly cleaned *by backwashing faster than ordinary resins* without loss of product.

Explore the many advantages of a single-pass, single-system product that is setting new industry standards. Your dealers and customers will be impressed

CR100

CR200

Crystal Right 100 is the most durable of the manufactured minerals. It raises the pH value of acidic water while it reduces hardness, iron, and manganese. Low pH waters tend to be more corrosive than neutral or higher pH waters. This pH adjustment and reduction of undesirable minerals is maintained by the excellent filtration and backwashing properties.

Crystal Right 200 is a select, high capacity mineral used for the reduction of hardness, iron, and manganese from water. The mineral is a crystalline structure manufactured to stringent specifications and quality control (screen analysis) guidelines. This extra effort assures the highest softening capacity of the zeolites. In addition to these high capacities, the consistently superior performance is possible because of its excellent filtration and backwashing characteristics.
